Project Details

Project Title	FID		
Project Area of Specialization	Online		
Project Start Date	05-02-2022	**Project End Date**	25-05-2022
Project Summary (less than 2500 characters)	An online platform is an e-learning platform that has been created using Internet technology. Not only is the Internet used for learning, it is also used in our everyday lives for all sorts of things. FID is an online android application which will provide multiple platforms in a single application. For example, if you want to do online shopping like we use Daraz, we can do that from FID. The plus point is we can also buy food from the same application. This application provides 4 different platforms i.e. 1. Online shopping, 2. Travelling, 3. Online food 4. Online services Like electrician, plumber etc. We will integrate 4 different platforms in this android application for the ease of customer so that everything the customer wants or need. We are also introducing FID wallet. With the help of this, customer can use his cash in all of the 4 platforms and also get cashbacks. Money can also be returned from FID wallet into the bank account if necessary. **FID** support so many of our daily activities that we have become dependent on them in our personal and professional lives. We rely on them to buy and sell goods and services, to find information online and to keep in touch with each other.		

Project Objectives (less than 2500 characters)	Our main goal is to provide ease to the customers. Customer satisfaction is the main objective of our project. Our motive is to provide the exact product you love at your doorstep regardless of time, place or geographical location, while understanding the precise needs of each customer. FID wallet is connected to all the platforms of FID application. If a customer gets cash back from online shopping platform, he can use it for his travelling. If he wants to return cash back to his bank account, he can do it without facing any inconvenience. Seller can also update is products on his online FID shop anytime he wants. The service part of the seller application is also very easy to use. The service provider can update hi profile whenever he wants. Both customer's and seller's information will help them track each other using their addresses, current locations and needs of the customer.

Project Implementation Method (less than 2500 characters)	We are using native android development technology to develop FID application. We are developing FID for android users. We use java programming language as backend and XML for front-end. FID platform provides different platforms on a single screen. Like all other apps you can also download FID application from play store We also adding AI based recommendation system which help the customer to get their desirable product. This recommendation system is developed in Python. We also added advanced GPRS technology which help the customer to engaged near by services provider like electrician etc. This application is divided into two parts. ➢ Customer part ➢ Seller part Customer part is the main part of application by which it places order or get services. Firstly, customer need to install the app in his/her android device from the play store. User will create his/her account in order to get benefits and use FID application. After creating an account, he will get access to all the features of the FID application. Now he can place order for food or online shopping and take advantages of our services house like he can hire electrician or plumber etc. And travel anywhere he wants. And the Second part of this application is Seller part. In this Part of app is controlled by owner. He can change in app facilities and product whenever he wants. Seller Part is also divided into four parts. Like if are talking about online shopping of Fid application There is also needed seller application which will receive order from the customer. All the parts of Fid application is connected with each other with the help of Database.

Benefits of the Project (less than 2500 characters)	By implementing FID, facilities become cheaper and more enjoyable. Pakistan's e-commerce market size posted a growth of over 35 percent in the first quarter of the fiscal year 2021 to Rs96 billion compared to Rs71bn over the corresponding period of last year. According to the Commerce Ministry, e-Commerce merchants with prepayment have been increased to 2,164 from 1,410 in the past 12 months. One report says that by 2022 Pakistan could observe a **25%** increase in the exportation of information technology. ➢ **Convenience**: Shopping become cheaper with our product. ➢ **Better Prices:** Cheap deals and better prices are available on **FID**, because products come to you direct from the manufacturer or seller without involving middlemen. ➢ **You Can Send Gifts More Easily:** Sending gifts to relatives and friends is easy, no matter where they are. All the packaging and shipping is done for you. ➢ You get an electronic record of the receipt of your purchase, which makes record-keeping much easier. ➢ You get to try things on in the comfort of your own home. ➢ It saves time! ➢ One of the prime reasons why most of the holiday lovers cling into the mobile apps is because they can make their entire bookings one roof. ➢ Money can also be returned from FID wallet into the bank account if necessary.

Technical Details of Final Deliverable (less than 2500 characters)

Project is delivered in Android Application form. FID is divided into 6 modules.

- GUI of FID (Customer Part)
- GUI of FID (Seller Part)
- Backend framework of FID
- Database management
- Recommendation system framework Integration
- GPRS Technology

Warranty documents:

Our product have complete warranty and guidance. users can get any kind of information get out from documents.

Pictures:

For clarity when setting up the project and helping those who will maintain and use FID application.

Facilities & Equipment Requirement is **665,000**
Working capital is **423,000**

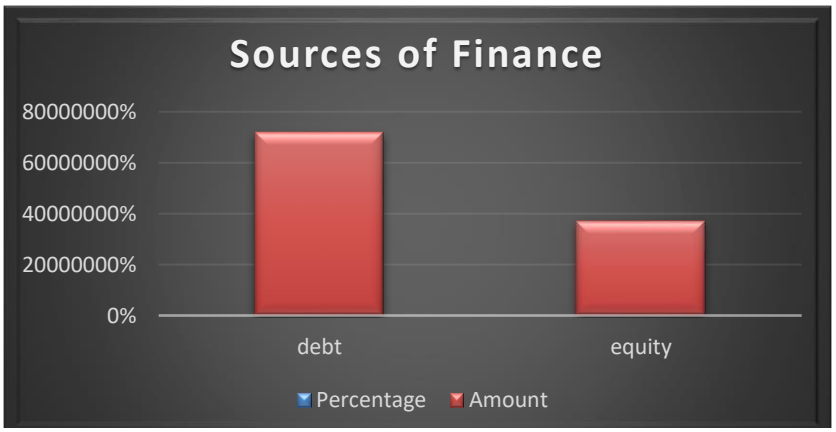
- **Starting Capital: Rs. 1,088,000**

SOURCES OF FINANCE

Capital structure;

Capital structure is assumed to be 66% equity and 34% Debt;

	Percentage	Amount (Rs)
Debt	66%	718,080
Equity	34%	369,920



Final Deliverable of the Project	Final Deliverable of the project is mobile application with proper its functionalities.
Type of Industry	Online App Development
Technologies	XML, MOBILE APPLICATION DEVELOPMENT, Java.
Sustainable Development Goals	EVERY CLASS PEOPLE

Project Key Milestones

Elapsed time in (days or weeks or month or quarter) since start of the project	Milestone	Deliverable
1-2 Week	Project Information Gathering	Project Proposal with all related information
3-4 Week	Business Analysis	Business Plan of Project
5-8 Week	Project Simulation and Designing	Project Prototype and Project Simulation
8-16 Week	Project Implementation	Designed Project with proper functionalities

Project Equipment Details

Item Name	Type	No. of Units	Per Unit Cost (in Rs)	Total (in Rs)
Printing Document	A4 Paper	1000 Sheets	3 Rs	300 Rs
Stationary for modeling	----------	----------	----------	----------
System Ram Integration for server performance	----------	----------	----------	----------
Computer System	Core i5	2	35000 Rs	70000 Rs

I affirm that all information submitted through this FYP application is correct and complete as to my best knowledge. I further agree that Ignite can approve, reject, defer or cancel this FYP application without mentioning any reason at any stage of NGIRI 2019. Information cannot be changed after submission.
