Institution Details

Province	Lahore Punjab	**City**	Lahore
Institution	Superior University	**Campus**	Gold Campus
Department	BSCS	**Degree Level**	4 Years
Degree Program	Bachelors 4 years program	**Telephone**	03065238220, 0303 4230144
Fax	---		

Supervisor Details

Name	Maam Arshia Naeem	**Mobile**	03234656578
Office No	#1	**Email**	
Designation	Senior Lecturer	**Qualification**	

Head of Department Details

Name	HOD Irfan Ud Din	**Mobile No.**	+92 345 9148191
Email	Irfan@superior.edu.pk

Project Details

Project Title	AGRAP (Agriculture In Rural Areas of Pakistan)		
Project Area of Specialization	Rural Areas Of Pakistan		
Project Start Date	19-4-2022	**Project End Date**	19-12-2022
Project Summary (less than 2500 characters)	**AGRAP(Agricultural Growth in Rural Areas of Pakistan)** An **IOT based application** is a dedicated app that helps farmers to increase their crop yield with updated information and technology. The information provided by this app covers everything from soil preparation to post-harvest, along with livestock and weather updates with audio, video and pictorial presentations. that will help farmers of Land and Dairy Farming by providing: guidance for the growth of cattle's and crops, Professional doctors in case of any kind of disease and Accurate rates of products. Our app will provide all the services that a farmer needs that are listed below: • Guidance from soil preparation to post-harvest • Weather updates • Mobile crop doctor that allows you to accurately detect pests and diseases on crops in seconds. detects plant damage and also the disease occur on livestock animals by clicking on a picture of a diseased crop. • Specialized team of doctors and professionals • Farmer training sessions • Monitoring of agricultural inputs, soil sampling and receiving complaints. • Proper feed plan for every breed of livestock • Provide voice feedback. • Talk to agricultural experts via audio/video call for advice • Get contact details from nearby agricultural stores and retailers • Get the latest local market rates for your preferred crops. We have the competitors in market but all gives different information at different levels but our app will provide all the information in single platform. Also, we give the platform to doctors and professionals to come to the app and provide solutions to the farmers and get paid. They can approach the nearest farmer through our app that is in need of help that would be unique feature.		

Project Objectives (less than 2500 characters)	Pakistan is an agricultural economy with agriculture and agriculture accounting for about 19% of GDP. In addition, 40% of the country's workforce works in the agricultural sector. But day by day farmers are leaving it because they find it difficult to handle the crops or cattels in case of any disease and no proper road map for the guidance of them. Our main objective is to make a farmer acknowledged of how to grow crops, increase the production. Our dairy farming has the potential to be used by our own country as well as we can export the dairy products. But our farmer is not using the proper feed and using old remedies to tackle the disease caused. Our app objective is to provide the farmer with every point related to agriculture such as • Soil conditions, crop health analysis, and weather updates are all provided through this app, making it a one-stop digital solution for farmers • Our will be easy to understand because majority of farmers is illiterate So, audio, video and photo presentations with every module on app with livestock and weather updates. • Turns your Android phone into a mobile crop doctor that allows you to accurately detect pests and diseases on crops in seconds. Detects plant damage and livestock disease by clicking on a picture of a diseased crop. • Live chat option with other farmers so they can share their experiences with each other • Platform for professional and doctors that can register and provide these services

Project Implementation Method (less than 2500 characters)

First we will make a professional team that will combine work to make an IOT based application that also includes AI modules. Our app would design in phases and through proper management. When our prototype is done then First we would target the specified area or village and deploy our app prototype and perform and do proper trials of app so, if our app is lagging any feature or having any difficulty for the farmers to understand it so we update it and improve our app accordingly. Then after a complete trial we would ready to launch our app.

Quality (Project Scope)		**Elapsed Time (Schedule)**	**Initial Investment /Cost**	
Research	Requirements and implementation	Month 1	Software	Rs 40,000
Model design and Development	IOT based Application	Month 2	Biosensor Machine	Rs 1,35,000
Model evaluation	results of evaluation	Month 3	Medicine	Rs 60,000
Model verification	verified model	Month 4	Social Marketing	Rs 50,000
Design and code interface	Implemented design	Month 5	Furniture	Rs. 150,000
Design and code system	Implemented system	Month 6	License	Rs 15,000
System testing	Testing results	Month 7	AC	Rs. 130,000
System verification	Verified system	Month 8	**Total Cost:**	**Rs.5,70,000**

Benefits of the Project (less than 2500 characters)	As our app is targeting the agriculture of Pakistan so this will increase the production as well quality products. So as the production of crops and milk increases prices of the every agriculture related product would decreased and it's easy to buy for everyone so no hunger problem for lower class. Not only these products would be available for locals but also we can export these products that will surely increase GDP of Pakistan. We have three revenue streams • Subscriptions • Marketing • Taking commission from doctors for using our platform • Google ads

Technical Details of Final Deliverable (less than 2500 characters)

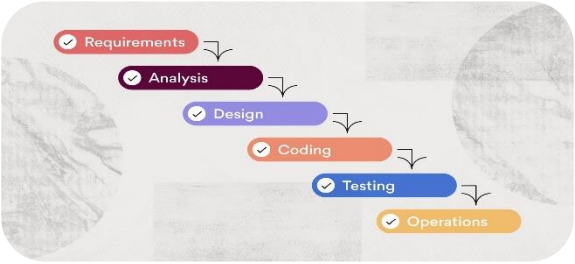
Requirements	Analysis	Design	Coding	Testing	Operations
Month 1 Month 2 Month 3	Month 4	Month 5	Month 6	Month 7	Month 8
Research, Model design and Development, Model evaluation	Model verification	Design and code interface	Design and code system	System testing	System Verification

Internal deliverables: Our app will impact the agriculture and Farmers of Pakistan. Through our AGRAP app the customer segments can reach us and we cure them .They have been acknowledged in the literature as being a vital source of competitive advantage and cost savings.

External deliverables: Special teams of Doctors that will help the farmers to choose right feed.

- Subscriptions
- Marketing
- Taking commission from doctors for using our platform
- Google ads

Planning deliverables:



Final Deliverable of the Project	Dec-2022
Type of Industry	Agriculture and Dairy Farming
Technologies	IOT based Application
Sustainable Development Goals	No hunger, Economic growth and no poverty

Project Key Milestones

Elapsed time in (days or weeks or month or quarter) since start of the project	Milestone	Deliverable
Month 1	Research	Requirements and implementationdetails
Month 2	Model design and Development	IOT based Application
Month 3	Model evaluation	results of evaluation
Month 4	Model verification	verified model
Month 5	Design and code interface	Implemented design
Month 6	Design and code system	Implemented system
Month 7	System testing	Testing results
Month 8	System verification	Verified system

Project Equipment Details

Item Name	Type	No. of Units	Per Unit Cost (in Rs)	Total (in Rs)
Software development cost	Software	none	Rs. 40,000	Rs 40,000
Biosensor (Animal Disease checker IA Set)	Biosensor Machine	1	Rs. 1,35,000	Rs 1,35,000
Medicine	Medicine	5	Rs. 12,000	Rs 60,000
Marketing	Social Marketing	none	Rs. 50,000	Rs 50,000
Office Furniture	Furniture	none	Rs. 150,000	Rs. 150,000
License	License	1	Rs. 15,000	Rs 15,000
Air Conditioner	AC	2	Rs. 65,000	Rs. 130,000
Other Office Supplies (Stationery, Internet device etc.)	Machinery,Laptops	2	Rs. 45,000	Rs. 90,000
			Total:	**Pkr Rs. 5,70,000**

I affirm that all information submitted through this FYP application is correct and complete as to my best knowledge. I further agree that Ignite can approve, reject, defer or cancel this FYP application without mentioning any reason at any stage of NGIRI 2019. Information cannot be changed after submission.
